

Project Proposal: Immigration Rate Analysis

Name: Romina Emadi

University: Mittweida university

1. Topic of the Project:

The project focuses on analyzing the rate of immigration in different countries and the various reasons behind it. The objective is to identify patterns and correlations between socio-economic factors and immigration rates based on available data.

2. Main Issues/Problems to Address:

- Identifying the key drivers of immigration in selected countries.
- Analyzing the impact of economic inequality, state legitimacy, public services, human rights, and security on immigration rates.
- Understanding the influence of external intervention and factionalized elites on immigration trends.

3. Data Description and Variables:

The data provided includes information on various socio-economic indicators for different countries, such as:

- Demographic Pressures
- Refugees and Internally Displaced Persons (IDPs)
- Economic Inequality
- Economy
- Public Services
- Human Rights
- Security Apparatus

- Factionalized Elites
- External Intervention

Each of these variables will be analyzed to determine their correlation with immigration rates. Descriptive statistics and visual analysis will be employed to assess the data.

4. Research Questions:

- Does economic inequality significantly impact the rate of immigration across countries?
- To what extent do demographic pressures contribute to immigration trends?
- Is there a noticeable correlation between public services quality and immigration rates?
- Does external intervention in a country lead to higher or lower immigration rates?
- How do human rights conditions affect the decision to migrate in different countries?
